The Ticontact spot functionality works best for air and sea freight RFQs with a simple sending structure, especially for frequently recurring events with similar requirements to the carriers.

**Create a carrier list**
- Define bidding rules
- Set up RFQ structure

**Create your RFQ as a template.** Set up the sending structure, the feedback and bidding rules, and the carrier pool that shall be invited one time, then define the fields for the quick edit form.

**Cloud-based platform for worldwide access and collaboration.**
- Browser compatibility with Edge, Chrome and Firefox allows quick and easy ramp up with no implementation effort
- Multiuser account with different user roles and subsidiaries to reproduce corporate structures and workflows

**Create new RFQ and choose from predefined templates.**
- Unlimited number of templates can be created from scratch or from existing RFQs or other existing templates
- Templates can be assigned to different users with different user rights for global collaboration

**With the quick edit form, only the relevant or variable fields of the RFQ have to be filled in.**
- All static fields and the whole matrix structure are already prefilled
- Which fields have to be modified in the quick edit form is specified in the chosen template

**Save and publish the new spot RFQ with just one click.**
- All service providers from the predefined carrier group are automatically invited to the RFQ
- Before the RFQ is published, the system runs an automated plausibility check

**View all offers—including all information from the matrix—at a glance.**
- Choose the winner and send a confirmation e-mail directly from the evaluation screen
- Send rejection e-mails directly from the evaluation screen

**A huge database with more than 35000 qualified service provider profiles.**
- The specialized platform for freight procurement with more than 65000 RFQs per year
- An e-sourcing tool used by 500+ of the leading shippers worldwide
