Real Time Visibility
by ◇ sixfold

As a shipper, you face a growing number of customer demands, particularly for improved visibility and shipment tracking. Your customers want real-time monitoring of deliveries and better order processing and tracking with status updates. One of your greatest challenges is to digitize the last mile of the supply chain. To help you tackle all this, we have partnered with Sixfold to provide you with a comprehensive real-time visibility solution.

Challenges:

» **Inefficient, expensive freight tracking:**
You must laboriously collect and collate current shipment data; this requires check calls and manual requests for status updates

» **Inadequate oversight and supervision:**
You and your customers often have no visibility of shipment status and progress until goods actually arrive at destination

» **No proactive exceptions management:**
Unless you have real-time information about problems and delays, you cannot be proactive to resolve these issues in advance

» **Limited predictability:**
Without real-time vehicle visibility, you must rely on guesswork and static scheduling of loading/unloading resources and connecting shipments

» **Low and divergent data quality:**
Carriers provide differing amounts of information, some of suboptimal quality, making it difficult for you to track and compare performance
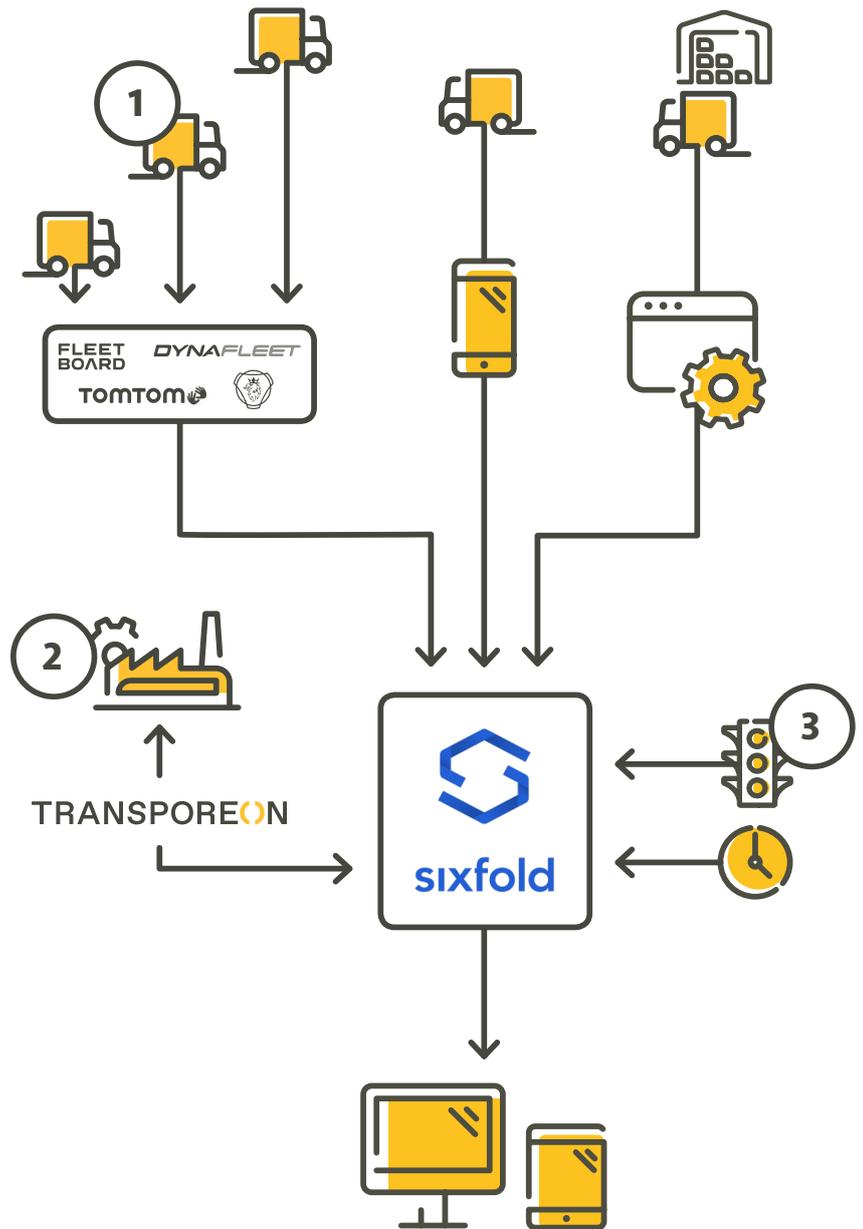

Features:

● **REAL-TIME GPS**
Live tracking and map display of vehicle and shipment geopositions for an end-to-end overview of status and progress

● **AUTOMATIC STATUS MESSAGES**
Real-time status updates are displayed and transmitted by email and text, enabling proactive response and rapid conflict resolution

● **ETA CALCULATION**
Ongoing calculation of the estimated time of arrival (ETA), taking into account traffic, weather, driver breaks and more

● **CONFIGURABLE ALERTS**
Alerts and notifications about predicted delays can be sent to authorized parties by creating specific mailing lists

● **DELIVERY CONFIRMATION**
Immediate notification of successful shipment delivery enhances shipper and carrier processes and improves customer satisfaction

● **AUTOMATED DATA COLLECTION**
Effortless, automatic collection and transmission of data from the telematics system or TMS replaces time-consuming manual processes and eliminates human error

How it works:

1. Carriers provide transport data by integrating their existing telematics systems
   Smaller operators may prefer to provide data via mobile devices. Option for carriers to provide data from their TMS
2. Data is automatically shared between Transporeon and Sixfold
3. Sixfold enriches carrier data with extra info e.g. traffic congestion, driver breaks

...Sixfold brings all the data together

» All authorized parties receive worldwide cloud access to the clearly structured Sixfold information

» Shipper can send tracking links with just one click to selected contacts: goods recipients, carriers, colleagues

» Mobile-optimized views mean that mobile device users do not need to install any apps

▶ *Get real-time visibility 24/7...*

Benefits:

» Optimize your supply chain with real-time visibility

» Keep goods recipients, carriers and colleagues informed

» Know where shipments are and when they will arrive

» Manage transports proactively and only by exception

» Build up actionable insights on KPIs and partner performance

» Improve all transport processes and asset usage
