

PRODUCT DATA SHEET

MERCAREON YARD MANAGEMENT

Our yard management solution incorporates planning from your dock scheduling/time slot management system to optimize resource utilization, increase transparency, cut waiting times and speed processing. The goods, each dock/gate, your depot and all vehicle movements are taken into account to boost productivity.

Challenges:

- **Vehicles without an appointment are invisible**
Tracing inbound trucks that arrive without a booked time slot or evaluating them in any follow-up analysis is impossible.
- **Optimally planned inbound flows vs. real situation**
If you use dock scheduling to manage goods receipt, you'll want the same efficiency in real time at your ramps during loading. That means quick, short-notice intervention and re-scheduling, avoiding utilization gaps and idling.
- **Integrated solution for check-in & call-off**
Language barriers during registration and call-off can be a struggle and existing radio paging systems should be seamlessly integrated.

Features of Yard Management:

YARDBOOK

Record and monitor all vehicles (without a booked time slot) and document dispatch status

LIVE YARDVIEW

Schedule overview in a continuous timeline, with allocation of time slots to real-time capacities and prioritizing loading tasks based on objective criteria

RESOURCE MANAGEMENT

Manage and control all existing capacities alongside all technical and human resources

CALL-OFF

Truck call-off via interface to the retailer's own paging system, with web-based paging systems or by text message directly to the driver's mobile phone

HARDWARE INTEGRATION

Interfacing and integration of Yard Management hardware (e.g. gates, cameras, scanners, driver check-in terminals or to call-up vehicles)

DASHBOARDS

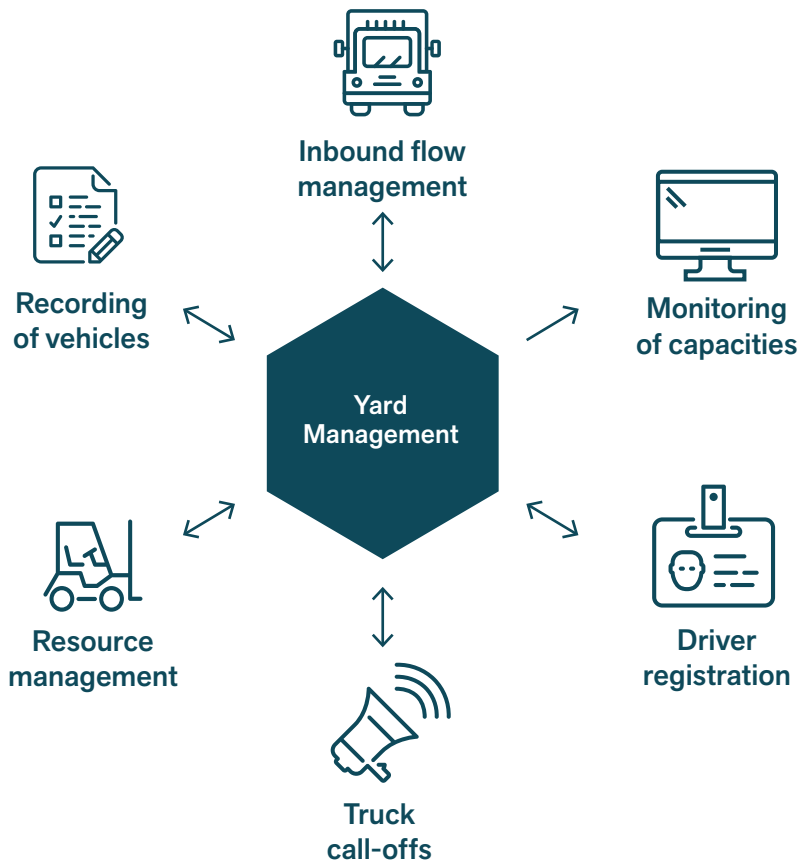

Real-time information about planned quantities/capacities, compared with currently received and collected goods

EVALUATIONS & ANALYSES

Automatically generated reports on punctuality, waiting and processing times, per carrier, per delivery and more

Processes Supported by Yard Management

HIGHLIGHTS:

Display of all deliveries in a **continuous timeline** in real time

Easy **drag-and-drop** assignment of appointments from dock scheduling to capacities

Real-time view of individual capacities including process duration, timeout and more

Visualization of current capacities and KPIs

Recording, monitoring and evaluation of **all vehicle movements** at the warehouse

Integration of **truck driver check-in** systems

Integration of radio-paging systems: call-off directly out of the dock scheduling system

Benefits

- ✓ Enables transparency, automation and optimization of incoming goods processes
- ✓ Closes planning gaps
- ✓ Avoids truck idling
- ✓ Optimizes resource utilization
- ✓ Minimizes the language barriers with drivers who speak a foreign language
- ✓ Connects inbound flow monitoring and vehicle call-off in a single solution
- ✓ Seamlessly integrates existing systems for call-off

"With Mercareon, we saw convincing functions that included detailed yard management."

Hendrik van Duuren,
Head of Logistics Rossmann
