

» SMART PROCUREMENT - Transform and digitalize your spot buying process

Enter the new era of procurement automation with **TNX logistics**

Solve the problem of not being able to consistently get the best spot market prices...

The AI-enabled spot tool that will help you reduce your spot buying spend.

What is TNX logistics?

TNX is a turn-key data science platform for road transport. Our software automates procurement using data and behavioral science to achieve lower freight rates.

We study how carriers make their pricing decisions and offer them instantly acceptable offers, nudging towards lower rates. And we use data science for carrier profiling, price predictions, and spot pricing tactics, with a high degree of price differentiation.

Behavioral Science + Data Science + Automation = Results!

The Problem

Spot pricing happens. The best procurement teams prepare for it while also working to avoid it.

Pricing is the lever with the highest impact on profit, but people aren't calculators. Tracking and exploiting spot market dynamics is beyond human scale.
